Syringe Filter

71 Nylon Syringe Filter (Non Sterile) Packed in Transparent Plastic Jar

High quality and cost effective, Nylon syringe filters are designed for sterilization or clarification of aqueous and solvent samples in a wide array of analytical and research applications. It is primarily used to filter small aqueous and organic samples with low hold-up volume in order to inject them directly into the HPLC sample loop system.

Disposable

- Luer-Lok and pressure fitting
- Ultrasonically bonded for reliability
- Clearly inscribed with the filter media type on barrel
- Excellent unit-to-unit and lot-to-lot reproducibility and consistency
- Made of high purity virgin polypropylene housing, no dyes or pigments added
- Unique with a concentric funnel shaped barrel to increase volume and decrease back pressure

76 PVDF Syringe Filter (Non Sterile) Hydrophilic, Packed in Transparent Plastic Jar

Syringe filters are designed for aqueous and organic solution samples. The sample prep syringe filters are used for clarification and particle removal from samples before instrumental analysis such as HPLC, IC, and GC. These syringe filters are available in a variety of filter membrane materials, offered in 0.2 μm or 0.45 μm pore sizes.

Syringe Filter

81 PTFE Syringe Filter (Non Sterile) Packed in Transparent Plastic Jar

High quality and cost effective, these Polytetrafluoroethylene (PTFE) syringe filters are HPLC certified and available in hydrophobic version.

- PTFE membranes are inherently hydrophobic; they are ideal for the filtration of nonpolar liquids and gases.
- Very resistant to solvents as well as acids or bases.
- Can be made more hydrophilic by flushing with alcohol, followed by water
- Used for filtering and de-gassing chromatography solvents
- Permits optimal utilization of small sample volumes
- Excellent chemical compatibility for filtering harsh chemicals that destroy other membrane materials
- Moisture barrier for venting applications and vacuum pump line protection
- Ideal for aerosol sampling
- Filter viscous organic based HPLC samples
- Glass microfiber prefilter raises absorption capacity and loading
- After pre-wetting with alcohol, may be used for fine particle removal of aqueous and mild organic solutions in Ion Chromatography

Pipettes

N321 NABL Volumetric Pipettes, Transfer Accuracy as per Class 'A' of I.S. 1117:1975 with NABL Calibration Certificate & Calibrated @ 27°C *

- Manufactured from 3.3 Low Expansion Borosilicate glass
- They have precision forced jets and bevel ground ends to resist chipping.
- All of the pipettes are individually measured and then marked
- Transfer (Volumetric) pipettes are manufactured from specially selected, heavy wall machine drawn borosilicate accurate bore glass tubing
- Each pipette With Unique serial number & Certificate of Calibration

476 Conical Flasks Erlenmeyer, N.M.

- Tops are reinforced and tooled with a rounded finish, containing more glass to give them maximum mechanical strength
- Body is thick-walled, with a long tapered outside contour to minimize chipping when struck or rubbed together
- All flasks have permanent amber scales to indicate approximate volumes at various levels, useful in measuring and mixing solutions where a high degree of accuracy is not necessary
- Manufactured from 3.3 expansion, low extractable borosilicate glass
